-I- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)O = protein tyrosine + phosphate.

-I- SUBCELULIAR LOCATION: Type I membrane protein.

-I- ALTERNATIVE PRODUCTS: A PRESUMED ALTERNATE TRANSCRIPT OF 4.8-5.0 KILOBASES, WHICH MAY LACK PTP DOMAINS, IS PRESENT IN PROLIFERATING OSTROBLASTS, BUT NOT DETECTABLE AT OTHER STAGES.

-I- TISSUE SPECIFICITY: BONE AND TESTIS. IN THE LATTER, RESTRICTED TO THE BASAL PORTION OF THE SEMINITEROUS TUBULE.

-I- DEVELOPMENTAL STAGE: UP-REGULATED IN LIFE STAGE MINERALIZING CULTURES. IN TESTIS, EXPRESSION IS HIGHEST BETWEEN STAGES I AND VOIL WHEN MATURING SPERMATIDS REMAIN BURIED WITHIN THE SERTOLI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               between the Swiss Institute of Bioinformatics and the EMBL outstation -

-i- FUNCTION: A PROTEINASE ACTIVATES THE INHIBITOR BY SPECIFIC PROTECLYSIS IN THE BAIT REGION, WHICH, BY AN UNKNOWN MECHANISM LEADS TO REACTION AT THE CYSTEINYL-GLUTAMYL INTERNAL THIOL ESTER SITE AND TO A CONFORMATIONAL CHANGE, WHEREBY THE PROTEINASE IS TRAPPED AND/OR COVALENTLY BOUND TO THE INHIBITOR. WHILE IN THE THEREBY THE PROTEINASE IS TRAPPED AND/OR COVALENTLY BOUND TO THE INHIBITOR.

HE FUNCTION: IMPLICATED IN CELL FATE SPECIFICATIONS DURING EMBRYO DEVELOPMENT. MAY BE INVOLVED IN THE FORMATION OF THE NEURAL PLATE, NOTOCHORD AND BRAIN VESICLES.

HEURAL PLATE, NOTOCHORD AND BRAIN VESICLES.

SUBCELLULAR LOCATION: Type I membrane protein.

HE SUBCELLULAR LOCATION: Type I membrane protein.

HE SUBCELLULAR LOCATION IN THE MEMBRASH ALL CELLS IN PRESASTRULATION STAGES. DURING GASTRULATION IS DIFFERENTIALLY EXPRESSED, AND NOTOCHORD. AT THE END OF GASTRULATION, EXPRESSED ALONG THE ANTERIOR-POSTERIOR AXIS INCLUDING THE DEVELOPING NEURAL PLATE AND EXPRESSED ALONG THE ANTERIOR-POSTERIOR AXIS INCLUDING THE DEVELOPING NEURAL PLATE AND DIFFERENTIATING MESODERM. ALSO PRESENT IN THE DEVELOPING

Participates with caspase-9 (Apaf-3) in the cytochrome c-dependent activation of caspase-3, leading to apoptosis. This activation requires Arp (By similarity). SUBUNIT: Monomer. Oligomedizes upon binding of cytochrome c and dATP. Oligometic Apaf-1 and pro-caspase-9 bind to each other via their respective NH2-terminal CARD domains (By similarity). SUBCELLULAR LOCATION: Cytoplasmic (By similarity). DEVELOPMENTAL STAGE: Highly expressed in brain cortex in embryos
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (E17) and new-born rats up to

BINDS ALSO TO THE TRANSACTIVATION DOMAIN OF THE HIV-1 NUCLEAR TRANSCRIPTIONAL ACTIVATOR, TAT. IT IS PROBABLY THE CIS-ACTING TRANSACTIVATION RESPONSE ELEMENT (TAR) RNA-BINDING CORFACTOR FOR TAT. ALSO SERVES AS AN ESSENTIAL COFACTOR FOR HIV 2-TAT AND SIMIAN IMMUNODEFICIENCY VIRUS (APRICAN MANDRILL) TAT FUNCTION.
SUBUNIT: ASSOCIATES WITH CDK9 TO FORM p-TEFB. CYCLIN T1 IS THE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PREDOMINANT CYCLIN ASSOCIATED WITH CDK9.
SUBCELLULAR LOCATION: Nuclear.
